

# > Digitalize your processes with simple end-to-end solutions

## AVAN 365 Solutions:

At **Infoavan** we are committed to making digital transformation your greatest competitive advantage. We are **value creators**, with a family of products, **AVAN 365 Solutions**, focused on **bringing agility** to your business process. Over 17 years of experience with 60 certified specialists in more than 300 projects carried out, converge with effective methodologies for each sector and industry to adopt effective and comprehensive solutions that allow you to make your processes more efficient.

## It is all about Power Platform

**AVAN365 solutions** are built on Microsoft Power Platform, allowing you to collect, manage, store and analyze your data and automate your processes from a single centralized platform in a secure way, scalable to any business logic and available from a variety of devices.

Power Platform provides storage, governance and security of your data, making it available from any device.

Empower your users, allowing them to collect, analyze and automate your business processes with the tools available in Power Platform.

From Infoavan we provide you with intuitive, agile and easy to use tools, so that you can spend your time on what is really important: the development of your business and your employees.

## Take your business to the next level

With **AVAN365** and **Power Platform** we provide comprehensive and agile solutions to your business, maximizing the use of resources, accelerating the digitization of your processes and adding value to your organization

# > Why Avan365 GSI?

## Improve the productivity of your employees

Productivity is one of the key determinants of business. It allows companies to maximize their value and adapt to the new needs that may arise in their sectors. To achieve a real increase in productivity, it is necessary to be able to analyze and improve each company process, and a tool that has become a key element in this task is the management of internal requests (GSI). The digitalization of this type of process reduces the time and resources needed to control and follow up on each request, facilitating administrative work and avoiding human error.

## Management of internal requests

### Employee benefits

- Simplicity for the user. Employees request what they need and receive it without worrying about the service delivery process. This allows them to focus more on their activities and increases their satisfaction by having a tool that facilitates their work and gives them a quick response.
- Self-service. Request management allows the user to be autonomous in making requests. This reduces administration costs and improves the user experience by providing more detailed and real-time information on the status of their request

### Company benefits

Properly managing holiday requests, medical leave and absences, as well as staff overtime, has an impact on the company's financial results, the working environment and productivity. Regardless of whether the organization is large or small, in many cases the management of these types of processes is too time-consuming and any oversight can lead to large losses and legal contingencies. The proper use and implementation of a digital request management improves the traceability of the process, those responsible can better monitor all its phases and use the information to continue improving it every day.

## AVAN365 | Time Tracking

Additionally, GSI integrates with AVAN 365 | Time Tracking, with which your collaborators can record their working hours, quickly, safely and easily, digitizing the entire process, and in compliance with Spanish regulations.
