Digitalize your processes with simple end-to-end solutions

AVAN 365 Solutions

At **Infoavan** we are committed to making digital transformation your greatest competitive advantage. We are **value creators**, with a family of products, **AVAN 365 Solutions**, focused on **bringing agility** to your business process. Over 17 years of experience with 60 certified specialists in more than 300 projects carried out, converge with effective methodologies for each sector and industry to adopt effective and comprehensive solutions that allow you to make your processes more efficient.

Take you business to the next level

With **AVAN365** and **Power Platform** we provide comprehensive and agile solutions to your business, maximizing the use of resources, accelerating the digitalization of your processes and adding value to your organization.

It is all about Power Platform

AVAN365 solutions are built on Microsoft Power Platform, allowing you to collect, manage, store and analyze your data and automate your processes from a single centralized platform in a secure way, scalable to any business logic and available from a variety of devices.

Power Platform provides storage, governance and security of your data, making it available from any device.

Empower your users, allowing them to collect, analyze and automate your business processes with the tools available in Power Platform.

From Infoavan we provide you with intuitive, agile and easy to use tools, so that you can spend your time on what is really important: the development of your business and your employees.

Why Avan365 | My Working Day?

Benefits for the user

Digitalize the record of each worker's working day quickly, safely and easily

A specific functional module that is integrated with Avan 365 | GSI application. With **AVAN 365 | My Working Day** you can comply with the current regulations that make it compulsory to record the working day carried out by each of the company's employees by using a technological solution that allows the entire process to be automated in a fast, secure and simple way, saving time in administrative procedures and reducing unnecessary costs in paper and storage.

Solved problems

> Manual input of clock-in and clock-out times by the worker, subtracting time from their working day for tasks of greater value.
> Delays in sending out time sheets
> Errors in recording
> High investment in time review
> Use of physical space for storing time sheets

Main functionalities of the application

> Automatic input of the standard time report.
> Management of different timetables (summer, winter, special).
> Automatic warning notifications
> Management of time reports for the approver
> Generation of time sheet reports in case of work inspection
> User access management

Benefits for the company

> Time savings in administrative tasks
> Reduction of unnecessary costs in paper and storage.
> Greater security and control of information
> Facilitates compliance with the regulations established in art.12, section 4 c) (Part time), and art.35.5 (Full time) of the revised text of the Workers' Act, approved by RDL 2/2015 of 23 October.

Greater simplicity

The user will only be responsible for checking that the time report generated corresponds to what is due, saving time and simplifying the process.

Error prevention

The user will be alerted, through the application, in the event that inconsistencies have been introduced according to the defined model, thus avoiding unnecessary loss of time.

Greater control of the process, as it can be managed from an application

1. Filtering of outstanding requests for approval.

2. Filtering of pending requests to be sent by employee/ month and year.

3. Generation of the historical time report approved by employee/ month and year
